PROFESSIONAL SUMMARY

Engineering leader with 10+ years of experience building and scaling both consumer-facing and internal web applications at Nike and Liberty Mutual. Track record of leading cross-functional teams to deliver high-impact products serving millions of users globally. Passion to combine deep technical expertise of modern frontend technology with an MBA to drive both engineering excellence and business value.

EDUCATION

Indiana University - Kelley School of Business, Indianapolis, IN Master of Business Administration, Major in Finance	2021
Purdue University, West Lafayette, IN Bachelor of Science, Computer Science	2016

WORK EXPERIENCE

Nike, Beaverton, OR (Remote)	Lead Software Engineer	2022 - Present
-------------------------------------	-------------------------------	-----------------------

- Created and fostered high-level technical strategies supporting in-store retail applications such as online to offline mode, a standardized tech stack and cross-platform patterns. Worked with business leadership to discuss options and outcomes, choose a go-forward path with proofs of concept, and evangelize adoption across teams.
- United developers and teams org-wide to create standardization and a community of practice for web applications used by retail employees. Patterns included authentication, CI/CD, and observability instrumentation, giving teams a clear path to design and deliver unified experiences quickly.
- Owned micro frontend powering Nike.com's store search modal from proof of concept to production across approximately 12 teams, improving multiple core consumer flows used by millions globally.
- Own Nike.com's Store Locator (Nike.com/retail and all child pages), a globally available high-traffic property with peak days exceeding one million sessions. Led end-to-end migration from Mapbox to Apple Maps in partnership with Apple engineers.
- Upgraded the organization's web authentication for iOS compatibility, modernizing core libraries while coordinating cross-team adoption so both web and mobile use the same consumer login service.
- Maintained and delivered internal reporting tools on store data used daily by retail employees globally.
- Founded a cross-team workforce development program creating a collaborative forum for engineers to share domain knowledge, strengthen competencies, and reduce cross-team friction.

Liberty Mutual Insurance, Indianapolis, IN	Senior Software Engineer	2020 - 2022
	Software Engineer	2017 - 2019
	Assoc. Software Engineer	2016 - 2017
	IT Analyst	2016

- Led multiple teams over years to build an internal insurance quoting application from greenfield to production; the platform now handles the full policy lifecycle and generates over \$100K+/day in premiums on average.
- Spearheaded the organization's first Python analytics models, driving investment decisions that led to eliminating legacy technology and establishing a cross-functional methodology aligning actuaries, data scientists, engineers, and stakeholders.
- Created and led a developer upskilling program teaching emerging technologies through hands-on AWS labs; 400+ developers across 60+ teams participated in the multi-organizational event.
- Established code review and release standards for a 3+ year project, streamlining delivery processes for 40+ developers across several teams.
- Architected a unified dashboard and monitoring infrastructure adopted by 20+ teams integrating 500+ applications, enabling on-time decommission of the legacy monitoring vendor.
- Led migration from legacy systems to event-driven cloud architecture, coordinating 20+ developers through design, implementation, and delivery.
- Initiated cross-team community events that senior leadership later adopted as an annual organization-wide engineer skill-building program.
- Maintained and reviewed Java codebases (up to tens of thousands of lines) across teams; planned and executed cloud migrations and decommissioned legacy on-premises systems.

CyberMetrix Inc., Columbus, IN**Software Engineer Intern****2015**

- Modernized a legacy Fortran test analysis system to Java, converting several hundred metrics used to test diesel engines.

SmartTemps LLC., Mishawaka, IN**Software Engineer Intern****2014**

- Built a Visual Basic application from scratch to update thermometer firmware, including UI development and low-level network interfaces for custom hardware.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python with early experience in Fortran, C++, C, and more.

Frontend: React, Next.js, Vite, HTML, CSS, Webpack, Angular 2.

Backend & APIs: Spring, Spring Boot, Maven, GraphQL, HATEOAS, REST.

Cloud & Infrastructure: AWS (CloudFront, Route 53, CDK, S3, Lambda, RDS, OpenSearch), Docker, CI/CD (Jenkins, GitHub Actions).

Observability & Security: New Relic, Splunk, AWS, Okta, and custom identity providers in high-traffic consumer contexts.

Methodologies: Agile, Scrum, DevOps, blue/green and rolling deployments.
