Summary

Senior full-stack engineer and web platform lead with 10+ years of experience. Bridge strategy and execution — partner with business leadership, product, design, and engineers on strategic initiatives. Set direction across engineering teams and remain hands-on from proof-of-concept to production.

Skills

- **Core:** JavaScript, TypeScript, React, Next.js, Node.js, REST APIs, AWS, Java, Spring Boot, Micro-frontends, and Webpack.
- **More:** Jest, Testing Library, Vite, Jenkins, GitHub Actions, Python, New Relic, Splunk, and Module Federation.

Experience

Lead Software Engineer, Nike – Beaverton, OR (Remote)

2022 – July 2026

- Selected as the embedded engineer for Nike's global innovation and emerging-technology workshops — partnered with Product, Store Ops, and Design leadership traveling across Oregon, Amsterdam, and London to build AI-powered prototypes shaping the next iteration of retail employee experiences.
- Founded a community of practice across teams building Nike's retail-store-operations platform — aligned standards on stack, CI/CD, testing, component and styling libraries, state management, observability, and AI-assisted application blueprints. Unified existing experiences across stores globally and gave teams a clear path to ship new ones.
- Led web platform for Nike.com — drove migrations to the latest React, Next.js, and core dependencies with full backwards compatibility, and coordinated cross-team adoption.
- Partnered with iOS and web engineers on a JavaScript bridge to deliver a unified auth flow across Nike.com and the Nike iOS app — both surfaces use the same login service.
- Built Nike.com's consumer-facing Store Search micro-frontend from proof-of-concept to production across ~12 teams — deployed in core consumer flows used by millions globally.
- Partnered cross-team to ship an async-chat micro-frontend on Nike.com — one team owns chat; every consumer surface picks it up. Live on nike.com/help.
- Own Nike.com's Store Locator, a global high-traffic property with 1M+ sessions on peak days — led end-to-end migration from Mapbox to Apple Maps in direct partnership with Apple engineers.
- Architected and developed Nike retail pages — built a headless, dynamically-generated experience letting product owners and store ops self-serve updates (hours, photos, services) with global propagation in minutes.

Senior Software Engineer, Liberty Mutual – Indianapolis, IN (Remote)

2020 – 2022

- Led multiple teams over 3+ years to build an internal insurance quoting application from greenfield to production — now handling the full policy lifecycle and generating \$36M/year in premiums.
- Established object-oriented design patterns and reusable Spring Boot components for the platform — adopted by 40+ developers across multiple teams to ship new insurance products faster.
- Created and led a developer upskilling program teaching emerging technologies through hands-on AWS labs; 400+ developers across 60+ teams participated in the cross-organizational event.

Software Engineer, Liberty Mutual – Indianapolis, IN (Remote)

2017 – 2020

- Acting interim for an Architect, led technical enablement of dashboards & monitoring, engaged 20+ teams to align the initiative. As a result, over 500+ applications successfully integrated new framework within a few months.
- Chosen to spearhead organization's first Python analytics models, leading a year-long initiative that drove investment decisions, eliminated legacy technology, and established a cross-functional methodology aligning actuaries, data scientists, engineers, and stakeholders.

Assoc Software Engineer, Liberty Mutual – Indianapolis, IN (Remote)

2016 – 2017

- Refactored Java insurance pricing services onto Spring Boot, Maven, and AWS EC2 as part of the company's first cloud migration wave, taking initiative to coordinate cross-team migration sequencing to decommission on-premises systems.

Education

IU Kelley School of Business – Master of Business Administration (MBA)

2021

Purdue University – BS in Computer Science

2016
