Summary

Senior full-stack engineer and platform lead with 10+ years of experience building scalable platforms and consumer-facing systems. Partners with product, design, engineering, and business leadership to lead cross-functional initiatives. Drives architecture direction across engineering teams while remaining hands-on from proof-of-concept to production.

Skills

- **Languages:** TypeScript, JavaScript, Java
- **Frontend:** React, Next.js, Vite, HTML, CSS, Webpack, Micro-frontends, Module Federation
- **Backend & APIs:** Node.js, Spring Boot, Maven, REST APIs, GraphQL
- **Cloud & Infrastructure:** AWS, CloudFront, Route 53, CDK, S3, Lambda, RDS, OpenSearch, Docker
- **CI/CD, Testing & Quality:** Jenkins, GitHub Actions, Jest, Testing Library, JUnit, Sonar, MDM, Jamf
- **Observability:** New Relic, Splunk, AppDynamics
- **Identity & Security:** OAuth, Okta, Ping Identity, custom identity providers
- **Leadership:** Platform architecture, technical strategy and standards, cross-functional partnership, delivery ownership

Experience

Lead Software Engineer, Nike – Beaverton, OR (Remote) 2022 – 2026

- Designed and implemented Nike.com's micro-frontend architecture, improving render performance and reusability across ecosystem experiences including Store Search, async chat, member signup, recommendations, and more.
- Led modernization of Nike.com's web platform — drove migrations for React, Next.js, core dependencies, and analytics infrastructure while supporting backward compatibility and coordinating adoption across 12+ teams.
- Built Nike.com's consumer-facing Store Search micro-frontend from proof-of-concept to production across ~12 teams — deployed in core consumer flows used by millions globally every day.
- Owned Nike.com's Store Locator, a global high-traffic property with 1M+ sessions on peak days — led end-to-end migration from Mapbox to Apple Maps in direct partnership with Apple engineers.
- Shaped frontend architecture across Nike retail-store-operations platforms by defining shared patterns, tooling, and technical standards that reduced fragmentation while preserving team autonomy.
- Operationalized those standards across 4 teams and 18+ engineers through shared workflows, documentation, and reusable platform capabilities, accelerating onboarding and delivery of new experiences.
- Selected for Nike's global innovation workshops, partnering with Product and Design leadership across the U.S. and Europe to prototype AI-powered retail experiences and influence how cross-functional teams approach discovery, experimentation, and delivery.
- Led cross-functional delivery of a unified reporting experience for Nike retail stores, defining scope, architecture, timelines, and execution across backend systems and frontend applications. Used daily by employees in 4,000+ global stores to monitor KPIs and operational performance.
- Delivered a unified authentication flow across Nike.com and the Nike iOS app, partnering with cross-functional teams to support a consistent sign-in experience for millions of daily users.
- Partnered cross-team to ship an async chat micro-frontend on Nike.com, enabling a centrally owned chat experience to be embedded across consumer surfaces.
- Architected and developed Nike retail pages — built a headless, dynamically-generated experience letting product owners and store ops self-serve updates (hours, photos, services) with global propagation in minutes.
- Proactively established recurring cross-team developer forums to strengthen engineering alignment, knowledge sharing, and technical decision-making; facilitated discussions on PRs, emerging technologies, and modern frontend practices.

Senior Software Engineer, Liberty Mutual – Indianapolis, IN (Remote) 2019 – 2022

- Led multiple teams over 3+ years to build an internal insurance quoting application from greenfield to production — now handling the full policy lifecycle and generating \$36M/year in premiums.
- Established object-oriented design patterns and reusable Spring Boot components for the platform — adopted by 40+ developers across multiple teams to ship new insurance products faster.
- Created and led a developer upskilling program teaching emerging technologies through hands-on AWS labs; 400+ developers across 60+ teams participated in the cross-organizational event.

Software Engineer, Liberty Mutual – Indianapolis, IN (Remote) 2016 – 2019

- Chosen to spearhead organization's first Python analytics models, leading a year-long initiative that drove investment decisions and established a cross-functional methodology aligning actuaries, data scientists, engineers, and stakeholders.
- Refactored Java insurance pricing services onto Spring Boot, Maven, and AWS EC2 as part of the company's first cloud migration wave, taking initiative to coordinate cross-team migration sequencing to decommission on-premises systems.

Software Engineer Intern, CyberMetrix Inc. – Columbus, IN 2015

- Modernized a legacy Fortran test analysis system to Java, converting several hundred metrics used by Cummins to test diesel engines.

Software Engineer Intern, SmartTemps LLC. – Mishawaka, IN 2014

- Built a Visual Basic application from scratch to update thermometer firmware, including UI development and low-level network interfaces for custom hardware.

Education

IU Kelley School of Business – MBA 2021

Purdue University – BS in Computer Science 2016
